

REPUBLIC OF BULGARIA

NATIONAL MARKET SURVEILLANCE PROGRAMME

2012

Introduction

To ensure the effective functioning of the Single European market and executing its obligations to guarantee the free movement of goods, since 2010 Bulgaria applies the requirements of Regulation (EC) № 765/2008 of the European Parliament and the Council setting out the requirements for accreditation and market surveillance relating to the marketing of products and repealing Regulation (EC) № 339/33. The National market surveillance programme for 2012 is prepared on the basis of the Regulation and in accordance with the provision of article 18 (5) thereof. The National programme consists of seven sectoral programmes. Their realization meets the set up general objectives.

I. General objectives

To ensure unhindered and effective functioning of the internal market, Bulgaria has established, in the field of free movement of goods, a legislative framework and an infrastructure which is necessary for its implementation. The process of development of the technical legislation in the country is carried out in accordance with some basic principles:

- Timeliness – The harmonized legal acts are transposed into the national legislation in the shortest time in order to guarantee a period which will be sufficient for the business to be in compliance;
- Information – The opinion of the business is sought during the participation in the development of the European technical legislation in order to form national positions; All proposals for legal acts are publicly available for opinions and comments; Competent institutions publish actual information concerning the new requirements and forthcoming amendments;
- Accuracy – The most precise and accurate reproduction of the requirements of the harmonized legislation is kept (is followed) in the process of transposition of the European legislation.

The general and sectoral legislation in the field of free movement of goods as well as the principles of the old and new approach are transposed into Bulgarian legislation by various legal acts – ministerial decrees and regulations. These acts lay down requirements for producers, importers, distributors and retailers. The observation of the requirements ensures production and placing on the market of safe and complying with the harmonized requirements products.

In Bulgaria there is a system of authorities carrying out surveillance activities in order to guarantee strict compliance with the legally set up requirements. According to Regulation (EC) № 765/2008 these authorities are called “market surveillance authorities”. They apply control and surveillance procedures and methods (prevention, inspection of documents, physical inspections, withdrawal, etc.) in order to place on the market only safe and complying with the legal requirements products. Within the frameworks of the prevention activities, the market surveillance authorities pursue an active policy to increase the information of the business and public. Within the frameworks of the initiatives to increase the information, the requirements of the European legislative framework concerning the safety of goods and procedures for conformity assessment are subject to explanation (clarification). Within the frameworks of the prevention activities, the market surveillance authorities provide information to their web sites and develop columns “questions and answers”, „advises for the consumer”, etc.; organize explanatory campaigns; participate in various forums and seminars; prepare and distribute printed materials. Within the frameworks of their information activities, the authorities provide data concerning dangerous products determined as such in consequence of their surveillance activity or for which they have received data in RAPEX system or as a result from the

cooperation with competent authorities of other member states. Specific surveillance activities are also carried out in case of signals and complaints from consumers and competitive economic operators.

When planning and executing their surveillance activities, the authorities take into account great number of elements of the risk assessment: danger degree, particular consumer group, results from previous inspections, seasonal increase of the consumer interest for some goods, etc. The latter requires organization of specialized campaigns because the seasonal supply and demand is specific for some goods (for example Christmas decoration).

The authorities are legally authorized to impose sanctions for noncompliance with the legal requirements, including imposing measures as prohibition or limitation of the realization of the product on the market.

Most of the surveillance activities are carried out on site of retailers and wholesale dealers in view of the significant part of the import of the products compared to the part of the product produced in the country. In Bulgaria there is established infrastructure suitable to carry out testing of most of the products which are subject to surveillance. In case of lack of capacity for testing specific parameters, the competent authorities use the services of accredited laboratories of other member states.

The administrative capacity and financial insurance of the surveillance activities are limited within the frameworks of the number of the specialized units in the relevant administrative structures and their annual budgets.

II. Organization at national level

Market surveillance activities in Bulgaria are performed by a system of competent authorities which functions are established in different sectoral laws. The surveillance functions are assigned to different institutions by different legal acts depending on the particulars of the product group. Bulgaria is among the member states which use the approach for organization of the market surveillance mainly at sectoral level. The seven sectoral market surveillance programmes for 2012 which will be realized by the competent authorities are presented as Annex to the present document. Within the meaning of Regulation (EC) № 765/2008 market surveillance authorities are the following institutions: Commission for consumer protection, State agency for metrological and technical surveillance, Directorate for National Construction Supervision, Regional health inspectorates, Bulgarian food safety agency, Pharmaceutical agency, Technical control inspectorate and Regional inspectorates of environment and waters. The system of market surveillance authorities functions by way of distribution of the competences among five ministries, namely Ministry of economy, energy and tourism, Ministry of health, Ministry of agriculture and foods and Ministry of environment and water.

A Council for coordination and exchange of information between competent authorities within the meaning of Regulation (EC) № 765/2008 has been established by a governmental act – Decree of Council of ministers № 180/2005. Since 1 August 2011 the deputy ministers of economy, energy and tourism, assigned by their minister, are respectively chairman and vice-chairman of the Council. The organizational and technical service of the Council's activity is realized by a Directorate within the Ministry of economy, energy and tourism.

The Council for coordination consists of representatives of Ministry of environment and water, Ministry of health, Pharmaceutical agency, Commission for consumer protection, Bulgarian food safety agency, Directorate for National Construction Supervision, National Customs Agency, State agency for metrological and technical surveillance, Executive Agency on Vine and Wine, Executive Agency Fisheries and Aquacultures, Executive Agency Plant Variety Testing, Approbation and Seed Control, General Directorate Criminal Police, Technical Control Inspectorate to the Minister of Agriculture and Food. These institutions within the arias of their

competences have control and surveillance functions for the products covered by Community harmonization legislation. They perform joint inspections, too. Institutions performing surveillance of products excluded from the scope of the Regulation (e.g. foodstuffs, medicinal products, etc.) also participate in the Council.

The Council for coordination is in practice a coordination point within the meaning of the Regulation and has a key role for ensuring the effective implementation of Chapter III of Regulation (EC) № 765/2008.

The Commission for consumer protection is the specialized state authority in Bulgaria dealing with the problems of the consumers' protection. The Commission is also one of the main internal market surveillance authorities. Among the main directions of activities are: surveillance of the general products and services safety at the Bulgarian market, protection of the main consumer rights, trade practices and methods of sale, etc. In addition the Commission for consumer protection is the Bulgarian contact point for RAPEX system.

The State agency for metrological and technical surveillance (SAMTS) carries out market surveillance activities for products covered by the New approach directives except for medical devices, where the market surveillance activities are assigned to the Pharmaceutical agency to the Minister of health.

Further the State Agency for Metrological and Technical Surveillance carries out market surveillance for products in the scopes of Directive 2009/125/EC on ecodesign requirements for energy-related products, Directive 2002/95/EC on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS) and Directive 2002/96/EC on waste electrical and electronic equipment (WEEE).
